Re: ATA300 Revision 2008, Cat. 1

Purpose:

By means of a laboratory simulation one shipping unit Plastic Case Max 750H400 is tested to transport strains. The test specifications are given by the client and are described in the ATA 300 Revision 2008, Cat. 1 standard.

Summary:

All tests were performed successfully. During the tests visible changes could be observed. Single latches unclenched during the drops but the case in total did not open. During the testing the drop edges and corners showed abrasion marks. The detailed visual inspection, the final functional tests, and the evaluation of the results will be performed by the client.

TEST REPORT No. 20-13551-B Revision 2

All testing was carried out by **PAConsult GmbH**, accredited by **DAkKS** (Deutsche Akkreditierungsstelle, D-PL-11130-01-02). The tested case is our **MAX750H400**, but the shallower version, **MAX750H280**, would also qualify due to similarity.

The results are on file at Panaro's corporate office. If you should have a project requiring such tests or have any questions regarding the above testing, please feel free to contact us at your convenience.
